Department of Functional Neurosurgery & Movement Disorders

CLINICAL EVALUATION NOTE

Date: August 24, 2026

Patient Name: Robert Williams	DOB: 06/14/1953 (Age 73)	MRN / Pt ID: pat-019
Gender: Male	Payer: BlueCross BlueShield	Policy ID: DEE-09991129
Diagnosis: Essential tremor (G25.0)	Requested CPT: 61863	Decision Status: Nurse Review Required

CLINICAL SUMMARY & NEUROPSYCHIATRIC EVALUATION

Clinical History & Indication:

Patient is a 73-year-old male with long-standing severe Essential Tremor (ICD-10 G25.0) causing significant functional impairment. Maximum tolerated medical therapy with Propranolol 240 mg/day and Primidone 750 mg/day has been trialed for over 14 months without adequate control. Referred for Deep Brain Stimulation (DBS) thalamic lead placement (CPT 61863).

Neuropsychiatric Assessment & Exclusions:

Formal neuropsychological evaluation shows intact cognition with MMSE score of 28 / 30. However, psychiatric screening reveals active severe depression with a Hamilton Depression Rating Scale (HAM-D) score of 24. In addition, clinical history notes comorbid refractory obsessive-compulsive disorder (policy exclusion). Due to active severe depression and policy exclusion markers, formal multidisciplinary clinical nurse review is required prior to surgical clearance.
