

UNIVERSITY OF CHICAGO TRANSPLANT CENTER

Multidisciplinary Kidney/Pancreas Evaluation Board

Patient Name: Michael Johnson	DOB: 11/08/1952 (Age 73)
Patient ID: pat-018	Gender: Male
Payer: UnitedHealthcare	Primary Care: Dr. Edward Miller, MD
Requesting Physician: Dr. Richard Vance, MD	NPI: 1987654321
Procedure Requested: CPT 50360 & 48554 (SKP)	Primary Diagnosis: E11.22 Type 2 DM / CKD

MULTIDISCIPLINARY EVALUATION NOTE — NURSE REVIEW / ESCALATION

Patient History & Clinical Indication:
Patient is a 73-year-old male with a 15-year history of Type 1 diabetes mellitus with or approaching end stage renal disease / Type 2 DM (ICD-10 E11.22, N18.4). Referred for Simultaneous Kidney-Pancreas (SKP) transplantation evaluation (CPT 50360, 48554). Verified candidate for kidney transplant (kidney transplant candidate: Yes). Endocrinologist management duration: 24 months. Type 1 DM verification: stimulated C-peptide testing.

Laboratory & Diagnostic Findings:
Current laboratory evaluation demonstrates an estimated GFR (eGFR) of **18 mL/min/1.73m²** (meets UNOS listing cutoff of <20 mL/min). Serum C-peptide level is **3.8 ng/mL** (normal/high, non-suppressed C-peptide). Daily insulin requirement is high-dose (>85 units/day).

Physical Examination & Anthropometrics:
Height: 5'10", Weight: 261 lbs, **BMI: 37.5 kg/m²** (Exceeds standard SPK threshold of <28 kg/m²; triggers high BMI relative contraindication >=35 kg/m²). Blood pressure on presentation is severely elevated at **178/104 mmHg** (Uncontrolled hypertension).

Exclusion Criteria & Infection Status:
Patient is currently being treated for an **uncontrollable active infection** (persistent vascular graft infection with MRSA bacteremia requiring ongoing IV Vancomycin therapy). Medical assessment confirms presence of policy exclusions: **uncontrollable active infection** and **uncontrolled hypertension**. Recommendation: Requires formal clinical nurse review and multidisciplinary committee evaluation due to policy exclusions and BMI 37.5.
