

CLINICAL NOTE - PRIOR AUTHORIZATION SUPPORT

Patient: John Anderson

Date of Birth: 1965-03-22

Member ID: BCB-4821-001

Insurance: BlueCross BlueShield PPO Gold

CHIEF COMPLAINT:

Severe right knee pain with significant functional limitations.

HISTORY OF PRESENT ILLNESS:

Patient is a 61-year-old male presenting with progressive right knee pain for the past 18 months. Pain rated 8/10 at rest and 10/10 with ambulation. Patient reports inability to walk more than one city block without stopping.

DIAGNOSIS:

Primary: M17.11 - Primary osteoarthritis, right knee (Grade IV on X-ray)

Secondary: E11.9 - Type 2 diabetes mellitus without complications

CONSERVATIVE TREATMENT HISTORY:

- Physical therapy: 24 sessions over 6 months (completed January 2026) - minimal improvement
- NSAIDs (ibuprofen 800mg TID) for 8 months - inadequate pain control
- Corticosteroid injection x2 (March 2025, July 2025) - temporary relief only
- Knee brace worn daily for 12 months - limited functional improvement

REQUESTED PROCEDURE:

CPT 27447 - Total Knee Arthroplasty, Right (modifier: RT)

Service Date: 2026-09-15

Place of Service: 21 - Inpatient Hospital

MEDICATIONS:

- Metformin 1000mg BID
- Lisinopril 10mg daily
- Acetaminophen 500mg QID PRN pain

CLINICAL JUSTIFICATION:

Patient has failed all conservative management options over 18 months. Radiographic evidence confirms Grade IV osteoarthritis with complete joint space loss. Functional assessment (KOOS score: 18/100) indicates severe disability. Surgical intervention is medically necessary.

Attending Physician: Dr. James Collins, MD
